

My Floaters as they appeared to me before my left eye

Beginning/Crisis - 2/17/08

2/25/08

2/29/08

3/1/08

3/26/08 (as it has seemed for a week or two by then. with just one floater that darted in and out from the sides and above and below).

These 3 are sketched 4/10/08 and indicate how the one floater, although much fainter, still darts in from the sides. Most of the time, when I'm concentrating on other things I don't even notice it any more. I have to consciously pause and seek it out.

P.S. My personal hunch was that I had a blood clot burst in my left eye, and it has slowly dissipated and is almost gone in answer to prayer. Praise the Lord! However, the specialist said, "No, the gelly in the eyeball just restored itself."
